SUBJECT INDEX

Volume 59 (1989)

ADP (phosphoryl donor), *Musa sapientum*, *Musaceae*, banana, phosphofructokinase, 45
Agrobacterium rhizogenes, hairy root culture, *Duboisia leichhardtii*, tropane alkaloids, scopolamine, variation, hairy root clones, 191
Agrobacterium tumefaciens, potato, genetic manipulation, neomycin phosphotransferase, transformation, binary vector, 175
Ambrosia maritima L, populations, isozymes, polymorphism, divergence, 211
Anabaena cylindrica, phosphoribulokinase, purification, regulation, thioredoxin activation, cyanobacterium, 1
Aromatic amino acids, valine, 3-phosphoglycerate (chloroplast synthesis), CO_2 (chloroplast synthesis), 167
Autonomous replication sequences (ARS), chloroplast DNA-*Chlamydomonas*, 77
Auxin, brassinosteroids, transformed tobacco, cytokinin, callus and suspension cultures, 63
Azorhizobium caulinodans, bacteroids, C_2H_2 reduction, enzymatic activities, O_2 limited conditions, *Sesbania rostrata*, 141

Bacteroids, *Azorhizobium caulinodans*, C_2H_2 reduction, enzymatic activities, O_2 limited conditions, *Sesbania rostrata*, 141
Banana, *Musa sapientum*, *Musaceae*, phosphofructokinase, ADP (phosphoryl donor), 45
Bean, demethylase activity, formaldehyde, heat shock, N^{ϵ}-trimethyl-L-lysine, 133
6-Benzylaminopurine, *Citrus mitis*, micropropagation, shoot regeneration, bud formation from roots, 203
Binary vector, potato, genetic manipulation, neomycin phosphotransferase, transformation, *Agrobacterium tumefaciens*, 175
Brassinosteroids, transformed tobacco, auxin, cytokinin, callus and suspension cultures, 63
Bud formation from roots, *Citrus mitis*, micropropagation, shoot regeneration, 6-benzylaminopurine, 203

C_2H_2 reduction, *Azorhizobium caulinodans*, bacteroids, enzymatic activities, O_2 limited conditions, *Sesbania rostrata*, 141
Ca^{2+} activated neutral protease, plasma membrane interaction, stimulation, 151
Callus cultures, nitrogen metabolism enymes, penicillins, 119
Callus and suspension cultures, brassinosteroids, transformed tobacco, auxin, cytokinin, 63
Cell (division and elongation), *Phaseolus vulgaris*, roots, root apex, vitamin D, stigmasterol, growth, 183
Cell division, *Chlamydomonas reinhardtii*, DNA polymerases, extranuclear genes, nalidixic acid, rifampicin, 87
Central cell, *Zea mays* L. (embryo sac isolation), female gametes, egg cell, enzymatic maceration, 127
Chlamydomonas reinhardtii, cell division, DNA polymerases, extranuclear genes, nalidixic acid, rifampicin, 87
Chloroplast DNA-*Chlamydomonas*, autonomous replication sequences (ARS), 77
Chloroplast gene, psbA, rice, transcription, 95
Citrus mitis, micropropagation, shoot regeneration, bud formation from roots, 6-benzylaminopurine, 203
CO_2 (chloroplast synthesis), aromatic amino acids, valine, 3-phosphoglycerate (chloroplast synthesis), 167
Cyanobacterium, phosphoribulokinase, purification, regulation, thioredoxin activation, *Anabaena cylindrica*, 1
Cyt-rRNA, cyt-tRNA, UTP compartmentation, half-life of RNAs, *Euglena gracilis*, 159
Cyt-tRNA, cyt-rRNA, UTP compartmentation, half life of RNAs, *Euglena gracilis*, 159
Cytokinin, brassinosteroids, transformed tobacco, auxin, callus and suspension cultures, 63
Cytoplasmic P_i, ^{31}P-NMR, maize (*Zea mays*), D-galactose, phosphorus metabolism, 11

Demethylase activity, bean, formaldehyde, heat shock, N^{ϵ}-trimethyl-L-lysine, 133
Developing endosperm, UDP-glucose phosphorylase, sucrose, starch, maize, wheat, 71
α-Difluoromethylarginine, *Lilium*, pollen germination, polyamine biosynthesis, polyamines, α-difluoromethylornithine, 53
α-Difluoromethylornithine, *Lilium*, pollen germination, polyamine biosynthesis, polyamines, α-difluoromethylarginine, 53
Divergence, *Ambrosia maritima* L, populations, isozymes, polymorphism, 211
DNA polymerases, cell division, *Chlamydomonas reinhardtii*, extranuclear genes, nalidixic acid, rifampicin, 87
Duboisia leichhardtii, *Agrobacterium rhizogenes*, hairy root culture, tropane alkaloids, scopolamine, variation, hairy root clones, 191

Egg cell, *Zea mays* L. (embryo sac isolation), female gametes, central cell, enzymatic maceration, 127
Enzymatic activities, *Azorhizobium caulinodans*, bacteroids, C_2H_2 reduction, O_2 limited conditions, *Sesbania rostrata*, 141
Enzymatic maceration, *Zea mays* L. (embryo sac isolation), female gametes, egg cell, central cell, 127
Euglena gracilis, cyt-rRNA, cyt-tRNA, UTP compartmentation, half-life of RNAs, 159
Extranuclear genes, cell division, *Chlamydomonas reinhardtii*, DNA polymerases, nalidixic acid, rifampicin, 87

Female gametes, *Zea mays* L. (embryo sac isolation), egg cell, central cell, enzymatic maceration, 127
Formaldehyde, bean, demethylase activity, heat shock, N^{ϵ}-trimethyl-L-lysine, 133

D-Galactose, ^{31}P-NMR, maize (*Zea mays*), phosphorus metabolism, cytoplasmic P_i, 11
Genetic manipulation, potato, neomycin phosphotransferase, transformation, binary vector, *Agrobacterium tumefaciens*, 175
Germination and growth of root and seedling, phospholipase D, inhibitors and activators, 35
Glutamate (synthase and dehydrogenase), *Helianthus annuus*, *Nicotiana tabacum*, protoplast culture, nitrate reductase, glutamine synthetase, 109
Glutamine synthetase, *Helianthus annuus*, *Nicotiana tabacum*, protoplast culture, nitrate reductase, glutamate (synthase and dehydrogenase), 109
Growth, *Phaseolus vulgaris*, roots, root apex, vitamin D, stigmasterol, cell (division and elongation), 183

Hairy root clones, *Agrobacterium rhizogenes*, hairy root culture, *Duboisia leichhardtii*, tropane alkaloids, scopolamine, variation, 191
Hairy root culture, *Agrobacterium rhizogenes*, *Duboisia leichhardtii*, tropane alkaloids, scopolamine, variation, hairy root clones, 191
Half-life of RNAs, cyt-rRNA, cyt-tRNA, UTP compartmentation, *Euglena gracilis*, 159
Heat shock, bean, demethylase activity, formaldehyde, N^{ϵ}-trimethyl-L-lysine, 133
Helianthus annuus, *Nicotiana tabacum*, protoplast culture, nitrate reductase, glutamine synthetase, glutamate (synthase and dehydrogenase), 109
Hemerocallis fulva, pollen, protoplast, *Iris tectorium*, *Zephyranthes grandiflora*, 101

Inhibitors and activators, phospholipase D, germination and growth of root and seedling, 35
Iris tectorium, pollen, protoplast, *Zephyranthes grandiflora*, *Hemerocallis fulva*, 101
Isozymes, *Ambrosia maritima* L, populations, polymorphism, divergence, 211

Lilium, pollen germination, polyamine biosynthesis, polyamines, α-difluoromethylarginine, α-difluoromethylornithine, 53

Maize, UDP-glucose phosphorylase, sucrose, starch, developing endosperm, wheat, 71
Maize (*Zea mays*), ^{31}P-NMR, D-galactose, phosphorus metabolism, cytoplasmic P_i, 11
Micropropagation, *Citrus mitis*, shoot regeneration, bud formation from roots, 6-benzylaminopurine, 203
Monocotyledons, pollen, polygalacturonase, pollen tube growth, 57
Musaceae, *Musa sapientum*, banana, phosphofructokinase, ADP (phosphoryl donor), 45
Musa sapientum, *Musaceae*, banana, phosphofructokinase, ADP (phosphoryl donor), 45

Nalidixic acid, cell division, *Chlamydomonas reinhardtii*, DNA polymerases, extranuclear genes, rifampicin, 87
Neomycin phosphotransferase, potato, genetic manipulation, transformation, binary vector, *Agrobacterium tumefaciens*, 175
Nicotiana tabacum, *Helianthus annuus*, protoplast culture, nitrate reductase, glutamine synthetase, glutamate (synthase and dehydrogenase), 109
Nitrate reductase, *Helianthus annuus*, *Nicotiana tabacum*, protoplast culture, glutamine synthetase, glutamate (synthase and dehydrogenase), 109
Nitrogen metabolism enymes, callus cultures, penicillins, 119

O_2 limited conditions, *Azorhizobium caulinodans*, bacteroids, C_2H_2 reduction, enzymatic activities, *Sesbania rostrata*, 141

^{31}P-NMR, maize (*Zea mays*), D-galactose, phosphorus metabolism, cytoplasmic P_i, 11
Penicillins, nitrogen metabolism enymes, callus cultures, 119
Phaseolus vulgaris, roots, root apex, vitamin D, stigmasterol, growth, cell (division and elongation), 183
Phosphofructokinase, *Musa sapientum*, *Musaceae*, banana, ADP (phosphoryl donor), 45
3-Phosphoglycerate (chloroplast synthesis), aromatic amino acids, valine, CO_2 (chloroplast synthesis), 167
Phospholipase D, inhibitors and activators, germination and growth of root and seedling, 35
— purification and properties, 25
Phosphoribulokinase, purification, regulation, thioredoxin activation, cyanobacterium, *Anabaena cylindrica*, 1
Phosphorus metabolism, ^{31}P-NMR, maize (*Zea mays*), D-galactose, cytoplasmic P_i, 11
Plasma membrane interaction, Ca^{2+} activated neutral protease, stimulation, 151
Pollen, polygalacturonase, monocotyledons, pollen tube growth, 57
—, protoplast, *Iris tectorium*, *Zephyranthes grandiflora*, *Hemerocallis fulva*, 101

Pollen germination, *Lilium*, polyamine biosynthesis, polyamines, α-difluoromethylarginine, α-difluoromethylornithine, 53
Pollen tube growth, pollen, polygalacturonase, monocotyledons, 57
Polyamines, *Lilium*, pollen germination, polyamine biosynthesis, α-difluoromethylarginine, α-difluoromethylornithine, 53
Polyamine biosynthesis, *Lilium*, pollen germination, polyamines, α-difluoromethylarginine, α-difluoromethylornithine, 53
Polygalacturonase, pollen, monocotyledons, pollen tube growth, 57
Polymorphism, *Ambrosia maritima* L, populations, isozymes, divergence, 211
Populations, *Ambrosia maritima* L, isozymes, polymorphism, divergence, 211
Potato, genetic manipulation, neomycin phosphotransferase, transformation, binary vector, *Agrobacterium tumefaciens*, 175
Protoplast, pollen, *Iris tectorium*, *Zephyranthes grandiflora*, *Hemerocallis fulva*, 101
Protoplast culture, *Helianthus annuus*, *Nicotiana tabacum*, nitrate reductase, glutamine synthetase, glutamate (synthase and dehydrogenase), 109
psbA, chloroplast gene, rice, transcription, 95
Purification, phosphoribulokinase, regulation, thioredoxin activation, cyanobacterium, *Anabaena cylindrica*, 1
Purification and properties, phospholipase D, 25

Regulation, phosphoribulokinase, purification, thioredoxin activation, cyanobacterium, *Anabaena cylindrica*, 1
Rice, chloroplast gene, psbA, transcription, 95
Rifampicin, cell division, *Chlamydomonas reinhardtii*, DNA polymerases, extranuclear genes, nalidixic acid, 87
Roots, *Phaseolus vulgaris*, root apex, vitamin D, stigmasterol, growth, cell (division and elongation), 183
Root apex, *Phaseolus vulgaris*, roots, vitamin D, stigmasterol, growth, cell (division and elongation), 183

Scopolamine, *Agrobacterium rhizogenes*, hairy root culture, *Duboisia leichhardtii*, tropane alkaloids, variation, hairy root clones, 191
Sesbania rostrata, *Azorhizobium caulinodans*, bacteroids, C_2H_2 reduction, enzymatic activities, O_2 limited conditions, 141
Shoot regeneration, *Citrus mitis*, micropropagation, bud formation from roots, 6-benzylaminopurine, 203
Starch, UDP-glucose phosphorylase, sucrose, developing endosperm, maize, wheat, 71
Stigmasterol, *Phaseolus vulgaris*, roots, root apex, vitamin D, growth, cell (division and elongation), 183
Stimulation, Ca^{2+} activated neutral protease, plasma membrane interaction, 151
Sucrose, UDP-glucose phosphorylase, starch, developing endosperm, maize, wheat, 71

Thioredoxin activation, phosphoribulokinase, purification, regulation, cyanobacterium, *Anabaena cylindrica*, 1
Transcription, chloroplast gene, psbA, rice, 95
Transformation, potato, genetic manipulation, neomycin phosphotransferase, binary vector, *Agrobacterium tumefaciens*, 175
Transformed tobacco, brassinosteroids, auxin, cytokinin, callus and suspension cultures, 63
N^{ω}-Trimethyl-L-lysine, bean, demethylase activity, formaldehyde, heat shock, 133
Tropane alkaloids, *Agrobacterium rhizogenes*, hairy root culture, *Duboisia leichhardtii*, scopolamine, variation, hairy root clones, 191

UDP-glucose phosphorylase, sucrose, starch, developing endosperm, maize, wheat, 71
UTP compartmentation, cyt-rRNA, cyt-tRNA, half-life of RNAs, *Euglena gracilis*, 159

Valine, aromatic amino acids, 3-phosphoglycerate (chloroplast synthesis), CO_2 (chloroplast synthesis), 167
Variation, *Agrobacterium rhizogenes*, hairy root culture, *Duboisia leichhardtii*, tropane alkaloids, scopolamine, hairy root clones, 191
Vitamin D, *Phaseolus vulgaris*, roots, root apex, stigmasterol, growth, cell (division and elongation), 183

Wheat, UDP-glucose phosphorylase, sucrose, starch, developing endosperm, maize, 71

Zea mays L. (embryo sac isolation), female gametes, egg cell, central cell, enzymatic maceration, 127
Zephyranthes grandiflora, pollen, protoplast, *Iris tectorium*, *Hemerocallis fulva*, 101
